

Company Overview

D&K Engineering is an international product design and contract manufacturing services company with a proven track record of turning innovative ideas into successful reality. Our clients rely on our Total Commercialization Solutions™ to evolve product ideas from early design through development and into sustainable lines of business. Our experience-driven engineering, manufacturing and supply chain services get products to market faster with lower overall cost of development providing our customers with significant competitive advantage. Our capabilities span the entire product development life cycle including: requirements definition, engineering analysis, concept creation, design, prototyping, production and field support.

The D&K Engineering Advantage

D&K Engineering provides enhanced value to its partner in five key areas:

- *Total Commercialization Solutions™* – We employ a proven, state of the art commercialization process based on extensive expertise across all disciplines of the product development cycle
- *Top-tier engineering talent* – thriving in a culture of innovation and discipline
- *Customized success journeys* – tailored to each client's business needs and continuously updated based on changing client, market and business case needs
- *A track record of success* – hundreds of successful product realization outcomes
- *A global ecosystem* – top-tier alliances and partners

Markets

- Medical/Life Sciences
- Smart Machines/Kiosks
- Industrial/Commercial
- Printing/Microfluidics
- Military

D&K Engineering Capabilities

D&K Engineering provides full turnkey development and manufacturing as well as project engagements focused on specific needs. Hardware, systems and content development clients engage D&K Engineering for deliverables ranging from concept designs and analysis to full production-level manufacturing.

Mechanical Engineering

- Engineering analysis
- Product and process engineering
- Tool engineering
- Automated and semi-automated manufacturing and test equipment

Software/Firmware Development

- Application development
- Embedded software development
- Firmware development
- Web-based software
- Industrial automation

Electrical and Electronic Engineering

- Analog and digital circuit design
- FPGA development
- Motors and drives
- Industrial automation

Contract Manufacturing

- Precision electromechanical assembly
- Proprietary in-process data collection and analysis software (i-Metrix™)
- One-offs, prototypes and tooling
- Manufacturing ramp-up, stabilization and transfer near-shore/offshore
- Manufacturing engineering
- Post-release support and sustaining engineering
- Agency (UL, CE, FCC, etc.) certification
